1 V1.0 Release Notes

Release Date

2013-10-23

Current Version

V1.0

Earlier Version

N/A

What's New

This topic describes the functions of the Huawei device plug-in integrated on the System Center. The Huawei device plug-in enables inband management for Huawei servers. After the integration is complete, you can discover Huawei servers and monitor the status of the server components on the System Center.

The Huawei device plug-in provides the following functions:

- Detects component installation and replacement.
- Monitors component health status.
- Manages and controls hardware.

The Huawei device plug-in is applicable to **System Center Operations Manager 2007 R2** and servers that run Microsoft Windows 2008

-

When to Scan	2013-10-23																														
Result	 <p>The image shows the Symantec Endpoint Protection scan result window. The title bar indicates the scan started on 2013-9-7. The main area shows a 'Completed' status with a folder icon. Below this is a table with columns for 'Filename', 'Risk', 'Action', and 'Risk Type'. The table is currently empty. At the bottom, there are buttons for 'Remove Risks Now', 'Details', 'Other Actions', 'Pause Scan', and 'Close'. A status bar at the very bottom shows 'Files scanned: 1' and 'Risks found: 0'.</p>																														

The software package, release documents, and product documents have been scanned by the McAfee antivirus software, and no virus is found. The following table lists the details.

Antivirus Software Name	McAfee VirusScan Enterprise
Antivirus Software Version	
Antivirus Database Version	
When to Scan	2013-10-23
